

**New Hampshire Small MS4
Nitrogen Source Identification Report
and
Potential Structural BMPs Report**

**Appendix H
Parts I.1.b and I.1.c**

Town of Stratham

September 2024

Introduction:

2017 NH MS4 permittees that fall under the Appendix H requirements due to a nitrogen impairment are required to complete a Nitrogen Source Identification Report (NSIR) during Year 4 and submit the report as part of the Year 4 Annual Report. **New Permittees are granted an additional 2 years from the deadlines stated in this document to complete the requirements per section 1.10.3 of the Permit.** Permittees with a nitrogen impairment are also required to complete a potential structural BMP report, using the information from their NSIR, and then submit this information as part of the Year 5 Annual Report. The following permittees are identified in the 2017 NH MS4 permit under Part 2.2.2.a.1 for a nitrogen impairment:

Danville	Newmarket
Dover	North Hampton
Durham	Portsmouth
Exeter	Raymond
Greenland	Rochester
Hampstead	Rollinsford
Hampton	Rye
Kingston	Sandown
Milton	Somersworth
New Castle	Stratham

This document is meant only to complete the requirements in Appendix H Sections I.1.b.i, I.1.c.i, I.1.c.ii, and I.1.c.iii which is for permittees with nitrogen impairments.

The requirements in Appendix H Part I.1.b.i are as follows:

i. Within four years of the permit effective date the permittee shall complete a Nitrogen Source Identification Report. The report shall include the following elements:

1. Calculation of total MS4 area draining to the water quality limited receiving water segments or their tributaries, incorporating updated mapping of the MS4 and catchment delineations produced pursuant to Part 2.3.4.6,
2. All screening and monitoring results pursuant to Part 2.3.4.7.d., targeting the receiving water segment(s)
3. Impervious area and DCIA for the target catchment
4. Identification, delineation and prioritization of potential catchments with high nitrogen loading
5. Identification of potential retrofit opportunities or opportunities for the installation of structural BMPs during redevelopment

The requirements in Appendix H Part I.1.c are as follows:

i. Within five years of the permit effective date, the permittee shall evaluate all permittee-owned properties identified as presenting retrofit opportunities or areas for structural BMP installation under permit Part 2.3.6.e. or identified in the Nitrogen Source Identification Report that are within the drainage area of the impaired water or its tributaries. The evaluation shall include:

1. The next planned infrastructure, resurfacing or redevelopment activity planned for the property (if applicable) OR planned retrofit date;
2. The estimated cost of redevelopment or retrofit BMPs; and
3. The engineering and regulatory feasibility of redevelopment or retrofit BMPs.

ii. The permittee shall provide a listing of planned structural BMPs and a plan and schedule for implementation in the Year 5 Annual Report. The permittee shall plan and install a minimum of one structural BMP as a demonstration project within the drainage area of the water quality limited water or its tributaries within six years of the permit effective date. The demonstration project shall be installed targeting a catchment with high nitrogen load potential. The permittee shall install the remainder of the structural BMPs in accordance with the plan and schedule provided in the Year 5 Annual Report.

iii. Any structural BMPs listed in Attachment 3 to Appendix F installed in the regulated area by the permittee or its agents shall be tracked and the permittee shall estimate the nitrogen removal by the BMP consistent with Attachment 3 to Appendix F. The permittee shall document the BMP type, total area treated by the BMP, the design storage volume of the BMP and the estimated nitrogen removed in mass per year by the BMP in each annual report.

Section 1: Nitrogen Source Identification Report

The purpose of this section of the document is to meet the requirement in Appendix H section I.1.b.i to create a Nitrogen Source Identification Report. Though Stratham includes both the raw municipally and privately-owned parcel data in Attachment A of this report, the information presented in this report focuses on municipally owned parcels rather than privately-owned. The reason for this focus was to complete this Year 4 requirement (Year 6 for new permittees) and also start to prepare for the Year 5 requirement (Year 7 for new permittees) in Section I.1.c.i to evaluate all permittee-owned properties for BMP retrofit opportunities.

The requirements in Appendix H Section I.1.b.i are as follows:

1. Calculation of total MS4 area draining to the water quality limited receiving water segments or their tributaries, incorporating updated mapping of the MS4 and catchment delineations produced pursuant to Part 2.3.4.6

Stratham has calculated raw data for municipal-owned and privately-owned parcels, based on impervious cover (IC) area, for the entirety of the regulated NH MS4 area. A spreadsheet containing all of Stratham's raw data can be found in Attachment A.

The total MS4 area within Stratham is: 5,523.3 acres

Stratham is using raw data that was prepared by a collaborative effort between the UNH Stormwater Center, GRANIT, and NH Department of Environmental Services. Information contained in the raw data has been sorted to identify non-conservation parcels owned by Stratham in descending order by acreage of impervious cover (IC) area, which indicates the priority rank for BMP implementation of municipally owned properties. A focus on municipally-owned properties is a priority for Stratham in order to prepare for the Year 6 requirement which states, "Within five years of the permit effective date *[for existing permittees and within 6 years for new permittees]*, the permittee shall evaluate all permittee-owned properties identified as presenting retrofit opportunities or areas for structural BMPs installation..." Reports using the raw data, and of which have the highest total nitrogen loads, have been prepared to identify the ranking and optimal number of parcels to be treated by BMPs. The top ranked municipally owned parcels are represented as the "knee" and can be found in Attachment C.

2. All screening and monitoring results performed in Year 6 pursuant to Part 2.3.4.7.d for the Town of Stratham can be found in Attachment B of this report.
3. Impervious area and DCIA for the target catchment:

For the purpose of this report, Stratham does not distinguish between impervious cover (IC) area and directly connected impervious area (DCIA). Stratham will assess priority parcels for treatment and will select those with verified directly connected impervious cover (IC) area for BMP implementation.

The total impervious cover (IC) area within Stratham is: 331.7 acres

4. Identification, delineation and prioritization of potential catchments with high nitrogen loading:

A table identifying and prioritizing the top municipally-owned potential parcels with high nitrogen loading can be found in Attachment C of this report.

Stratham is using raw data that was prepared by a collaborative effort between the UNH Stormwater Center, GRANIT, and NH Department of Environmental Services. Information contained in the raw data has been sorted to identify non-conservation parcels owned by Stratham in descending order by acreage of impervious cover (IC) area, which indicates the priority rank for BMP implementation of municipally-owned properties. A focus on municipally-owned properties is a priority for Stratham in order to prepare for the permit requirement which states, “Within five years of the permit effective date [*for existing permittees and within 6 years for new permittees*], the permittee shall evaluate all permittee-owned properties identified as presenting retrofit opportunities or areas for structural BMPs installation...”. Reports using the raw data, and of which have the highest total nitrogen loads, have been prepared to identify the ranking and optimal number of parcels to be treated by BMPs. The top ranked municipally-owned parcels are represented as the “knee” and can be found in Attachment C.

5. Identification of potential retrofit opportunities or opportunities for the installation of structural BMPs during redevelopment.

Stratham has identified potential retrofit opportunities for the installation of structural BMPs of municipally-owned properties during redevelopment, including the removal of impervious cover (IC) area.

Attachment D contains the prioritized list of municipally-owned parcels with consideration of multiple factors including: 1.) prioritized list of municipally-owned parcels with the highest total nitrogen pollutant loads and 2.) a number of factors from section 2.3.6.e that are used to determine the potential of each parcel to be retrofitted with a stormwater BMP.

A focus on municipally-owned properties is a priority for Stratham in order to prepare for the Year 5 requirement (Year 6 for new permittees) which states, “Within five years of the permit effective date [*for existing permittees and within 6 years for new permittees*], the permittee shall evaluate all permittee-owned properties identified as presenting retrofit opportunities or areas for structural BMPs installation...”.

Section 2: Potential Structural BMPs Report

The purpose of this section of the document is to meet the requirements in **Appendix H Part I.1.c.i** to evaluate all permittee-owned properties for potential BMPs to reduce stormwater pollutants including nitrogen, **Part I.1.c.ii** to provide a list of BMP(s) that have been installed on permittee-owned properties, and **Part I.1.c.iii** to track and document the metrics for each of the BMPs installed within the permittees regulated area. The permittee-owned properties that are used in this evaluation are taken directly from Stratham's Nitrogen Source Identification Report in Section 1 of this document.

Part I.1.c.i:

The Town of Stratham has evaluated all permittee-owned properties identified as presenting retrofit opportunities or areas for structural BMP installation under permit Part 2.3.6.e. or identified in the Nitrogen Source Identification Report that are within the drainage area of the impaired water or its tributaries. The evaluation included:

1. The next planned infrastructure, resurfacing or redevelopment activity planned for the property (if applicable) OR planned retrofit date;
2. The estimated cost of redevelopment or retrofit BMPs; and
3. The engineering and regulatory feasibility of redevelopment or retrofit BMPs.

Permittee-Owned Properties Retrofit Evaluation

Parcel Address	Next Planned Infrastructure Improvement	Estimated Cost	Engineering and Regulatory Feasibility of Redevelopment or Retrofit
Smyk Park, 7 Bunker Hill Avenue	2024	\$6,850	Rain gardens and grass swale construction were determined to be feasible.
Stratham Hill Park, 270 Portsmouth Ave	Anticipated 2026	TBD	Believed to be technically feasible, financial feasibility TBD.
Stratham Hill Park 17 Jack Rabbit Lane	Not scheduled	TBD	Believed to be technically feasible, financial feasibility TBD.
Transfer Station, 25 Union Road	Not scheduled	TBD	Believed to be technically feasible, financial feasibility TBD.
Fire Station & Historic Society 4 Winnicutt Road	Not scheduled	TBD	Believed to be technically feasible, financial feasibility TBD.

Part I.1.c.ii:

The Town of Stratham has provided a listing of planned structural BMPs and a plan and schedule for implementation in the table above.

The Town of Stratham is planning to install the following project within the drainage area of the Squamscott River South in Year 7 (2024/2025): rain garden and grass swales at Smyk Park, 7 Bunker Hill Avenue. The Town of Stratham will install the remainder of the structural BMPs in accordance with the plan and schedule above. This plan will be evaluated annually and will be adjusted accordingly.

The Town of Stratham will provide a listing of planned structural BMPs and a plan and schedule for implementation in the Year 7 Annual Report. The Town of Stratham will plan and install a minimum of one of the identified structural BMPs as a demonstration project within the drainage area of the water quality limited water or its tributaries in accordance with the permit requirements. The Town of Stratham will install the remainder of the structural BMPs in accordance with the plan and schedule above. This plan will be evaluated annually and adjusted accordingly.
