

Stormwater Pollution Prevention Plan (SWPPP) for:

Stratham Hill Park

Revised May 2024

TOWN OF STRATHAM

EPA NPDES Permit Number NHR041000

Stormwater Pollution Prevention Plan for Stratham Hill Park

Facility Name: Stratham Hill Park

Facility Address: 270 Portsmouth Avenue, Stratham, NH 03885

Section 1: Stormwater Pollution Prevention Plan Overview

This Stormwater Pollution Prevention Plan (SWPP) does the following:

- Identifies the SWPPP team, by name and title
- Describes the facility, with information on location and activities, a site map, and a description of the stormwater drainage system;
- Identifies potential stormwater contaminants;
- Describes stormwater management control and best management practices (BMPs) needed to reduce pollutants in stormwater discharges; and
- Describes the facility's monitoring plan;

Section 2: Stormwater Management Program Team

SWMP Team Coordinator:

Position/Title: Town Administrator
Name: David Moore
Department: Town Administration
Phone Number: 603-772-7391 ext. 181
Email Address: DMoore@StrathamNH.gov

SWMP Team:

Position/Title: DPW Director
Name: Tim Stevens
Department: Department of Public Works
Phone Number: 603-772-5550
Email Address: DPWdirector@StrathamNH.gov

Position/Title: Planning Project Assistant
Name: Susan Connors
Department: Planning Department
Phone Number: 603-772-7391 ext. 184
Email Address: SConnors@StrathamNH.gov

Section 3: Site Description

The Town of Stratham’s, Stratham Hill Park is located at 270 Portsmouth Ave. Stratham, NH 03885. The facility includes an a public parking area, variety of athletic and multi-purpose fields, forested trails, and a variety of barns and similar buildings for event venues and the annual Town Fair. The facility is open to the public.

A map of the facility is included as Figure 1 at the end of this SWPPP. The map identifies key buildings and sites, general direction of surface water flow; there are no municipal stormwater facilities at this site and stormwater generally sheet flows to vegetated swales.

Table 3-1 includes a list of activities that occur at the facility and the potential pollutants that may be associated with each activity.

Table 3-1: Facility activity list and potential pollutants associated with each activity.

Activity #	Description	Potential Pollutants
1	Parking Areas	Oil/gasoline, salt, sediment
2	Waste bins/pet waste	Bacteria, nitrate, trash debris

Section 4: Implementation

This section describes practices at that are in place or that will be implemented to control pollutants that have the potential to contaminate stormwater. The following sub-sections describe the relevant management practices that will be implemented as identified in Section 2.3.7.2 (iv) in the MS4 permit. Unless otherwise stated, all measures will be implemented to be consistent with the schedule required in the MS4 permit, or no later than the end of year 5 of the permit if not otherwise described.

Section 4.1: Minimize or Prevent Exposure

Permit Language: *The permittee shall to the extent practicable either locate materials and activities inside, or protect them with storm-resistant coverings in order to prevent exposure to rain, snow, snowmelt and runoff (although significant enlargement of impervious surface area is not recommended). Materials do not need to be enclosed or covered if stormwater runoff from affected areas will not be discharged directly or indirectly to surface waters or to the MS4 or if discharges are authorized under another NPDES permit.*

The site-specific practices will be implemented to minimize or prevent exposure of pollutants to stormwater runoff:

- Trash bins are covered and maintained appropriately to reduce overflow;
- Pet waste receptacles located throughout park and at trail heads;
- Parking lot uncurbed to allow sheet flow and infiltration;
- Spring sweeping of parking lot.

Section 4.2: Good Housekeeping

Permit Language: *The permittee shall keep clean all exposed areas that are potential sources of pollutants, using such measures as sweeping at regular intervals. Ensure that trash containers are closed when not in use, keep storage areas well swept and free from leaking or damaged containers; and store leaking vehicles needing repair indoors.*

The following list describes good housekeeping practices followed at this facility:

- The parking lot shall be swept annually, or more as-needed, to minimize sediment and associated pollutants from entering the stormwater drainage system;
- Outdoor storage areas will be regularly swept and kept free of leaking or damaged containers.

Section 4.3: Preventative Maintenance

Permit Language: *The permittee shall regularly inspect, test, maintain, and repair all equipment and systems to avoid situations that may result in leaks, spills, and other releases of pollutants in stormwater to receiving waters. Inspections shall occur at a minimum once per quarter.*

The following is a list of preventative maintenance procedures practiced at this facility:

- Drainage swales are kept clear;
- All materials, waste storage areas, drains, tanks, and cans are properly labeled.

Section 4.4: Spill Prevention and Response

Permit Language: *The permittee shall minimize the potential for leaks, spills, and other releases that may be exposed to stormwater and develop plans for effective response to such spills if or when they occur. See Section 2.3.7.2 (iv) in the MS4 permit for additional details.*

The following is a list of spill prevention and response procedures practiced at this facility:

- The Town has a written spill prevention and response policy that is consistent with the MS4 requirements described in Section 2.3.7.2 (iv);
- Small quantities of liquid chemical storage at the facility is limited to that used for routine restroom cleaning;
- Spills will be contained as close to the source as possible with absorbent materials;
- The assigned spill response team leader will be advised immediately of all hazardous or regulated material spills, regardless of quantity;
- All spills will be evaluated to determine the necessary response;
- Staff are aware of spill prevention and response procedures;
- Propane deliveries to four above ground propane tanks are completed by qualified personnel;
- Above ground propane tanks are inspected for signs of corrosion or leaks at time of delivery.

Section 4.5: Erosion and Sediment Control

Permit Language: *The permittee shall use structural and non-structural control measures at the facility to stabilize and contain runoff from exposed areas and to minimize or eliminate onsite erosion and sedimentation. Efforts to achieve this may include the use of flow velocity dissipation devices at discharge locations and within outfall channels where necessary to reduce erosion.*

There are no known areas for potential erosion at this site.

Section 4.6: Management of Runoff

Permit Language: *The permittee shall manage stormwater runoff from the facility to prevent or reduce the discharge of pollutants. This may include management practices which divert runoff from areas that are potential sources of pollutants, contain runoff in such areas, or reuse, infiltrate or treat stormwater to reduce the discharge of pollutants.*

The following management practices for runoff are used at this facility:

- Impervious areas are uncurbed where practical to encourage sheet flow runoff to vegetated areas.

Section 4.7: Salt Storage Piles

This facility is not used for salt stockpiles.

Section 4.8: Employee Training

Permit Language: *The permittee shall regularly train employees who work in areas where materials or activities are exposed to stormwater, or who are responsible for implementing activities identified in the SWPPP (e.g., inspectors, maintenance personnel), including all members of the Pollution Prevention Team. Training shall cover both the specific components and scope of the SWPPP and the control measures required under this Part, including spill response, good housekeeping, material management practices, any best management practice operation and maintenance, etc. EPA recommends annual training.*

Key staff will be regularly trained on stormwater related topics such as: stormwater system maintenance practices, salt storage and handling procedures, spill response and cleanup procedures, and other key topics. Please refer to Stratham Stormwater Management Plan (SWMP) for additional details on employee training.

Stratham DPW will retain records on employee training including:

- The training date, title, and duration;
- Municipal attendee list;
- Subjects covered during training.

Section 4.9: Maintenance of Control Measures

Permit Language: *The permittee shall maintain all control measures, required by this permit in effective operating condition. The permittee shall keep documentation onsite that describes procedures and a regular schedule for preventative maintenance of all control measures and discussions of back-up practices in place should a runoff event occur while a control measure is off-line. Nonstructural control measures shall also be diligently maintained (e.g., spill response supplies available, personnel trained).*

The following is a list of stormwater control measure maintenance procedures practiced at this facility:

- All control measures required by this permit will be maintained in effective operating condition;
- Stratham will work to develop backup procedures and practices in case a runoff event occurs while a control measure is offline.

Section 5.0: Inspection and Record Keeping

Section 5.1: Site Inspections

Stratham will conduct quarterly (Jan-Mar, Apr-Jun, Jul-Sep, Oct-Dec) inspections of the facility that will cover all areas exposed to stormwater, and all stormwater control measures. At least one of the inspections during a period when stormwater discharge is occurring. Additional inspections will occur on an as-needed basis if significant activities are exposed to stormwater. The inspections will be completed on the form “MS4 – SWPPP Facility Site Inspection Form, Stratham Hill Park, 270 Portsmouth Avenue”.

If control measures are discovered to need repair or be ineffective, whether as part of a routine inspection or otherwise, Stratham will repair or replace them as soon as practicable, and preferably before the next storm event.

Section 5.2: Record Keeping

Stratham will maintain records of all maintenance, inspection, training, and other activities required by Section 2.3.7.2 of the MS4 permit. Records will be maintained for at least five (5) years, as required by Section 4.2.1 of the MS4 Permit.

Figure 1: Facility site map identifying key buildings and sites. Note: there are no floor drains that tie into the stormwater drainage system (Stratham does not have such a system), there are no known stormwater catch basins or outfalls.

Public Works Department 603-772-5550
70 Bunker Hill Avenue · Stratham, NH 03885

MS4 – SWPPP Facility Site Inspection Form Stratham Hill Park, 270 Portsmouth Avenue

Inspect all areas that are exposed to stormwater and all stormwater control measures at least once per calendar quarter. More frequent inspections may be required if significant activities are exposed to stormwater. **Inspections shall be performed when the facility is in operation. At least one of the quarterly inspections shall occur during a period when a stormwater discharge is occurring.**

Inspection Date: _____ Inspection Time: _____

Inspector(s): _____

Weather (include precipitation amount if any): _____

1. Stormwater Discharge Description (check one): None Light Moderate Heavy

2. Stormwater discharge notes, if any:

3. Have any previously unidentified discharges been identified as part of this inspection? Yes No
If yes, describe:

4. Are any control measures in need of maintenance or repair? Yes No
If yes, describe:

5. Are any control measures in need of replacement? Yes No
If yes, describe:

6. Are any changes to the SWPPP needed based on this inspection? Yes No
If yes, describe:

**Please scan a copy of this inspection and email it to the Stratham Planning Office.
Keep the hard copy at the DPW office for at least five (5) years after the inspection date.**
